Contents

• Measures
  – Riemann Integration;
  – \(\sigma\)-algebra and Borel \(\sigma\)-algebra;
  – Measures and their properties;
  – Borel measure on the real line;
  – Measurable sets;

• Integration
  – Complete spaces;
  – Lebesgue measure;
  – Measurable Functions and their properties;
  – Lebesgue integral and their properties;
  – Simple functions;
  – Convergence of the Lebesgue Integral: the Monotone Convergence Theorem, the Fatou’s Lemma, the Dominate Convergence Theorem;

• Signed Measures
  – Signed Measures and their properties;
  – The Hahn decomposition Theorem;
  – Mutually singular measures and their properties;
– The Jordan Decomposition Theorem;
– Absolutely Continuous measures and their properties;
– The Lebesgue-Radon-Nikodym Theorem;
– Functions of bounded variations;
– The fundamental theorem of calculus for Lebesgue Integration;

• Probability theory
  – Definition of probability;
  – Conditional probability;
  – Real random variable;
  – Cumulative distribution function;
  – Conditional Expectation and properties;
  – Kolmogorov Fundamental Theorem and Definition.
